

Customer Testimonial: CITO DYNAMIC
Company: Hohendahl Wellkarton GmbH
Issued by: Tim Heubuch

Since January 2012 we have been using the new CITO DYNAMIC creasing matrix manufactured by CITO and we find it very impressive. The new DYNAMIC product range offers the ideal solution for all our applications from folding carton board and corrugated board right through to displays, and so for us CITO DYNAMIC is the ideal choice for medium and large runs.

The following reasons in particular convinced us to use the newly-developed CITO DYNAMIC product:

- guaranteed non-delamination due to the new CITOTHAN material
- improved sharp edges (residual height is reduced to almost zero), which contributes to increased production efficiency
- higher production reliability due to reduction in machine downtime

The new material is also excellent to work with and is therefore perfectly suited to our creasing process.

We have decided to switch over our STANDARD range of creasing systems for these reasons, with the result that we are now almost exclusively using CITO DYNAMIC in our production.
