

CITO ULTIMATE

High-performance film-based creasing matrix
Optimum results also for corrugated board

At CITO-SYSTEM GmbH, progress is omnipresent. Cutting and creasing processes are optimized and tools and materials are developed further as needed. Always focused on our customers, the company provides professional support with experience, know-how and training, and is sure to find the right solution for every requirement. The R & D department uses state-of-the-art high-speed video, simulators and measurement technology.

In the field of creasing technology, the company offers the world's largest range of creasing systems. CITO products stand for perfect creasing quality and optimum cost-benefit. A good example of this is CITO ULTIMATE, the high-performance film-based creasing system. The flexible coating with a sturdy base ensures

consistently high and constant creasing quality from the first to the very last sheet. Due to the back-springing shoulders, exactly the same conditions are created for every crease. Both in laboratory tests and in practice, runs of over 500,000 sheets were produced with constant crease quality.

CITO ULTIMATE is also ideally suited for repeat jobs and archiving in combination with 1 mm cutting plates. The creasing matrix sets itself apart due to perfect handling with fingerlift and can be easily trimmed with the knife. Excellent adhesion on the cutting plate and residue-free removal thanks to EasyFix technology ensure user-friendly application.

The success of CITO ULTIMATE in the processing of solid and carton board as well as the demand of corrugated board converters prompted CITO-SYSTEM GmbH to expand its product range to include microwave and corrugated board. Especially with these materials, both high runs and absolutely constant crease quality are decisive factors.

CITO ULTIMATE reduces breaking of the crease in corrugated board. The extremely chamfered outer edges prevent visual damage of the surface. The flexible coating compensates for fluctuations in the corrugated board and allows constant creasing quality with the highest quality standards. The patented creasing system is available in about 600 different sizes, specials and specialties.

CITO ULTIMATE - creasing quality „Made by CITO“!
