

CITO SPIKES

Easy and convenient to handle and straightforward to set up on the Spikes strips.

- Simple changeover of the Spikes on the strip
- Heights in line with European diecutting standards
- No risk of injury when changing over Spikes
- Packing sheets standardised and suited to corrugated board thicknesses
- Easy-to-assemble strips are self-adhesive
- Identical in concept to Mini-Spikes

CITO Spikes are perforating tools whose distinguishing features are very easy and convenient handling. These Perfa types are characterised by extreme stability and a uniform shape, which helps to prevent outlines in the material to be cut. There is no risk of injuries due to the self-adhesion as an installation aid and extremely easy handling of the spikes when exchanging them in the rail.

If you purchase the complete CITO Spike System, you receive a system of spike rails and packing adapted to the different corrugated boards.
