

Customer Testimonial: RSP System 2.0 on an SM 102

Company: BasseDruck GmbH

Issued by: Dorothee Nienhaus (Dipl. Ing. (BSc) Printing Technology)

We have been working with the RSP System fitted to the printing unit of our SM 102 since 2011. In July of this year we made a decision to change over to the RSP System 2.0.

The deciding factors for upgrading to the RSP 2.0 base plate were: firstly, the new locking hinge which reduces makeready times and, secondly, the new option of using the RSP direct fit flexible die as an alternative to self-assembled grid sheets.

Now that we are using the RSP direct fit flexible die, we can finish our jobs inline not only quicker, but also more accurately and at a lower cost.

We are also very satisfied with the service and support we receive when ordering RSP direct fit flexible dies. It's more than just about processing orders; it's about bringing in constructive suggestions for improvement which can optimise the production of a print job.
